

State Science and Engineering Profiles and R&D Patterns: 1997-98 (Early Release Tables)

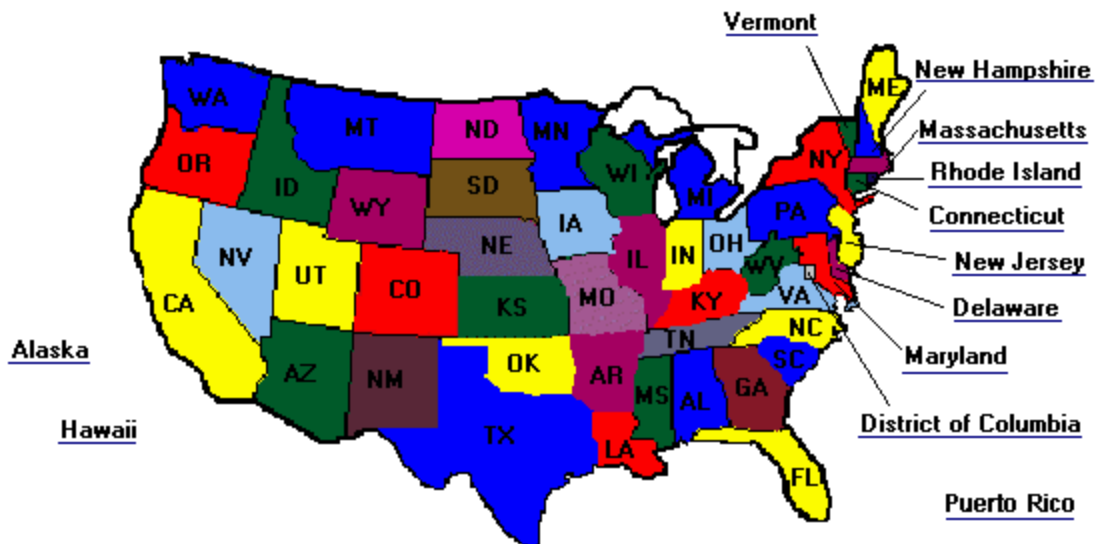

This report provides state-specific data obtained from numerous surveys of NSF/SRS and other Federal Government agencies. Including a data source page, the report is a set of 52 one-page Profiles (including ones for D.C. and Puerto Rico) that summarize varied state-specific data on personnel and finances. These tables are also provided as one of the sections of the more-comprehensive SRS special report, *State Science and Engineering Profiles and R&D Patterns: 1997-98*, forthcoming.

The SRS-surveyed databases include the following: doctoral scientists and engineers; S&E doctorates awarded, including by major S&E fields; S&E graduate students and postdoctorates; Federal R&D obligations, by agency and performer; total and industrial R&D expenditures; and academic R&D expenditures, including by major S&E fields.

Data from non-SRS sources include population, civilian labor force, per capita personal income, Federal expenditures, higher education expenditures, patents, small business innovation research awards, and gross state product originating in sectors such as manufacturing, agriculture, trade, government, and services.

State rankings and totals are for the 50 States, D.C., and Puerto Rico. For the Puerto Rico profile, the data sources for some variables differ from those used to obtain state data and reliable, comparable data do not exist for two variables.
